

Recommendations

1. Embed severe weather/climate risk in risk assessment process
2. Standard reporting method for critical service providers
3. Consider changes in severe weather frequency and intensity as well as gradual shifts
4. Consider future climate projections in all major and critical infrastructure development

Suggested process

- Risk assessment
- Business Continuity planning
- Reporting

Process for reporting

- Stage 1: risk assessment
- Stage 2: possible adaptation response
- Stage 3: Implementing, embedding and monitoring
